

POWER BI EXECUTIVE REPORT: SUPERSTORE ANALYTICS (2026)

Lead Analyst: Uttam Tiwari

Platform: Power BI Desktop

Focus: Context Transition, Granular Ranking, and Operational Intelligence

1. **DASHBOARD OBJECTIVE**

The primary goal was to move beyond standard "Aggregate Reporting" and build a Granular Performance Dashboard. The dashboard is engineered to handle complex row-level contexts, ensuring that Regional Totals do not mask Individual Customer contributions.

2. **CRITICAL ENGINEERING (THE "CONTEXT" FIX)**

The Challenge: "The Aggregate Trap"

Initial matrix visualizations displayed misleading data. For example, the top customer in the South Region appeared to have sales of \$389,000+ (which was the Regional Grand Total), rather than their actual individual contribution.

The Solution: Dynamic Ranking & Row Context

I engineered a DAX-based solution to force a "Context Transition," isolating the specific customer within the selected region.

DAX Formula Used:

```
Customer Rank =  
RANKX(  
    ALLSELECTED('superstore_cleaned'[customer_name]),  
    [Total Sales],  
    ,  
    DESC  
)
```

Logic: By applying a visual-level filter (Customer Rank is 1), the dashboard dynamically calculates the top performer based on the active slicer selection (Region/Category).

Result: Sean Miller was correctly identified as the South Region leader with verified sales of \$23,669.21.

3. **ADVANCED UX FEATURES (LOGISTICS MODULE)**

To visualize the SQL-verified logistics data without cluttering the main interface, I implemented a "Hover-to-Explore" mechanism.

Feature: Interactive Logistics Tooltip

Trigger: Hovering over the "Avg Ship Time" KPI card.

Visual: A hidden Report Page appears, displaying a Bar Chart of Average Delivery Days by Ship Mode.

Insight:

Standard Class: ~5 Days (Meeting SLA)

First Class: ~2 Days (Premium Speed)

Same Day: 0.04 Days (Near-Instant)

4. 🔍 KEY BUSINESS INSIGHTS (VISUALIZED)

Region	Top	Customer	Sales	Profit	Status
South	Sean	Miller	\$23,669	\$5,555	● Highly Profitable
Central	Tamara	Chand	\$18,437	\$4,788	● Highly Profitable
East	Tom	Ashbrook	\$13,723	\$1,883	● Profitable
West	Raymond	Buch	\$14,345	\$1,552	● Profitable

B. Product Profitability

The "Canon" Factor: The Canon ImageCLASS Copier is visualized as the single largest profit driver. A specific drill-through analysis confirms that high-value customers (like Tamara Chand) are purchasing this specific item.

C. Geographic Distribution (Map Visual)

Sales Concentration: High density of profitable sales is observed in New York and California.

Profit Leaks: The map highlights negative profit zones in parts of Texas and Ohio, primarily driven by the "Tables" sub-category.

5. 💡 STRATEGIC RECOMMENDATIONS

Loyalty Segmentation:

Create a "VIP Tier" for the top 4 regional customers (Sean, Tamara, Tom, Raymond) offering exclusive "First Class" shipping upgrades.

Inventory Planning:

Stock levels for Canon Copiers must be prioritized in the Central and South regions to prevent stockouts during Q4 peaks.

Operational Upselling:

Since "Same Day" shipping is operationally efficient (0.04 days delay), marketing should aggressively upsell this service to increase margins on low-value orders.
